

Installation guide for Terminal_MT5_EA.ex5

Welcome! Below, I will show you how to correctly install the **Terminal_MT5_EA.ex5** file in your **MetaTrader 5**.

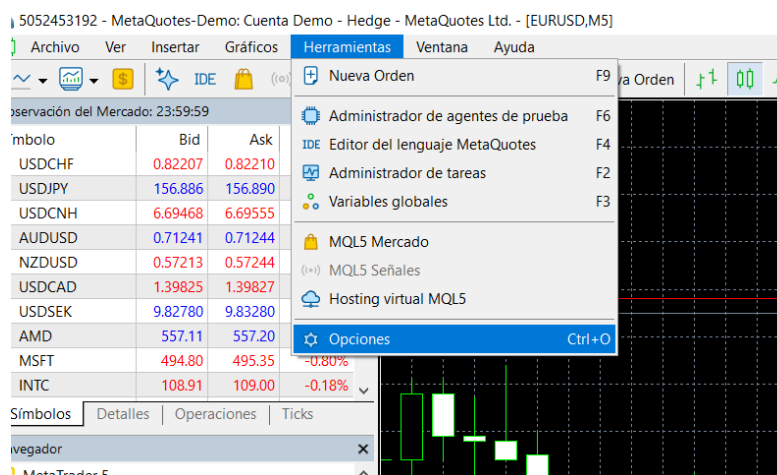

This file is an **Expert Advisor** designed to automatically connect your MetaTrader 5 account(s) with the **Terminal MT5** Chrome extension; if you do not yet have the program installed on your PC, please download it securely from this URL: <https://www.metatrader5.com/es>

You must be logged in with the account you wish to use for trading:

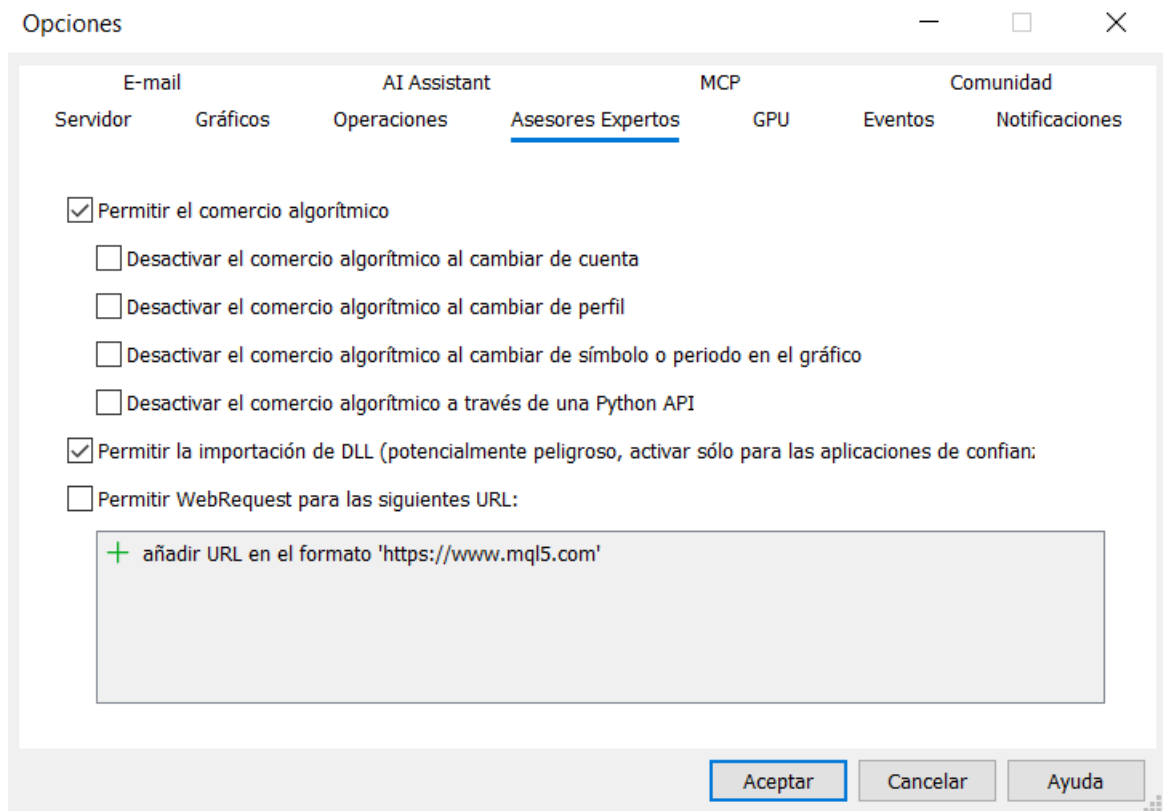

MetaTrader 5 Configuration

1. Go to the top menu: Tools > Options (or press Ctrl + O):

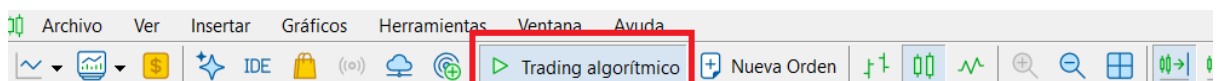

2. Select the tab **Expert Advisors**
3. Check the following boxes and click Accept:

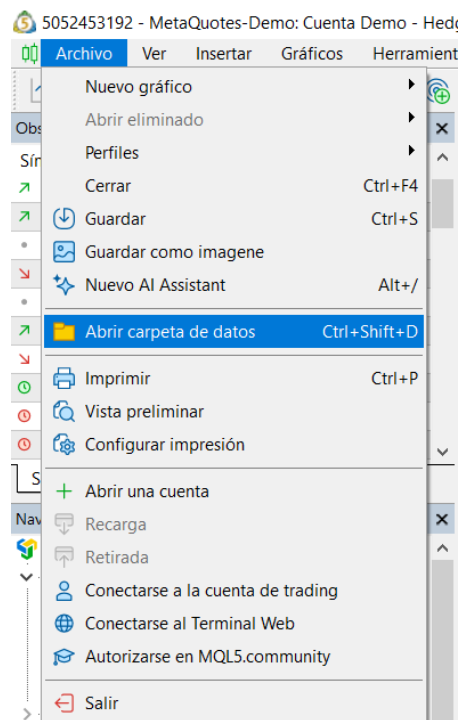

- **Allow algorithmic trading.**
- **Allow DLL import.**

4. Check that the **Algorithmic trading** button on the top bar is **GREEN**; if not, click on it.:

Installation of Terminal_MT5_EA.ex5

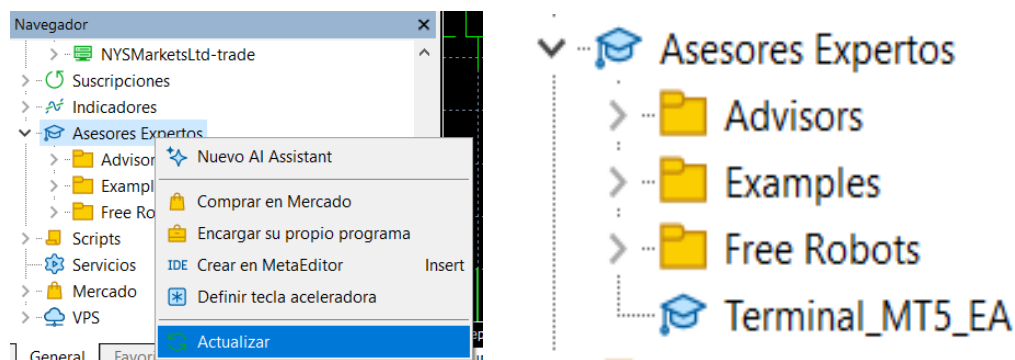

1. Go to File > Open Data Folder:

2. Go to the **MQL5 > Experts** folder and paste the **Terminal_MT5_EA.ex5** file into that folder

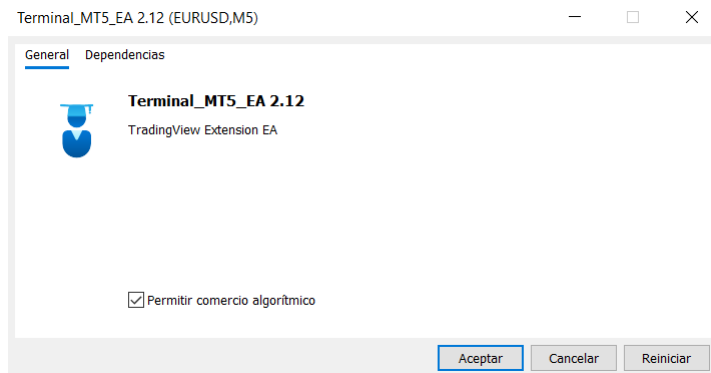

Nombre	Fecha de modificación	Tipo	Tamaño
Advisors	29/06/2026 23:38	Carpeta de archivos	
Examples	29/06/2026 23:37	Carpeta de archivos	
Free Robots	30/06/2026 13:36	Carpeta de archivos	
Terminal_MT5_EA.ex5	15/09/2026 20:09	MQL5 Program	71 KB

3. Return to MetaTrader 5, go to the **Navigator** panel (left side), right-click on the **Expert Advisors** folder, and select **"Refresh"**:

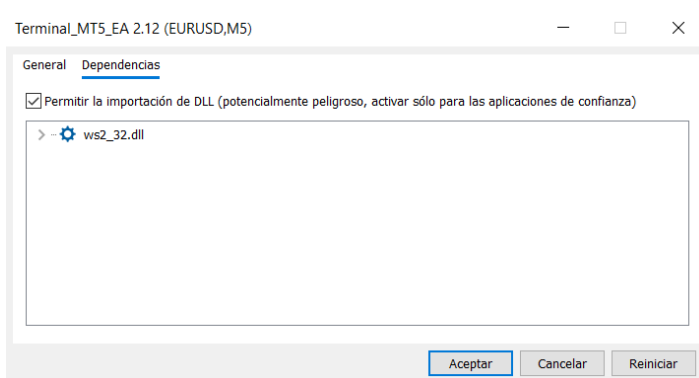

The file must appear in the panel within **Expert Advisors**.

4. Open the chart for any pair (e.g., EURUSD) in MetaTrader 5 and drag the EA from the Navigator onto the chart. A pop-up window appears:

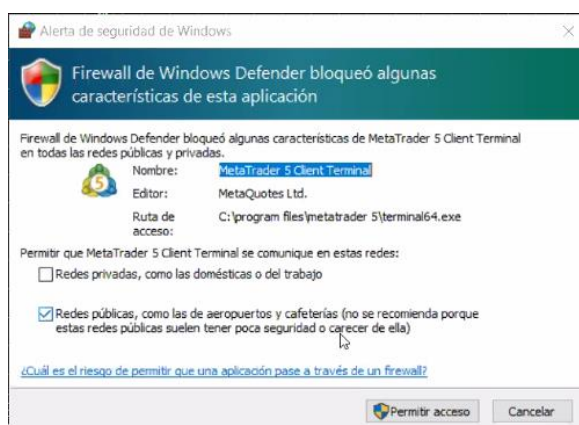

Select “**Allow algorithmic trading**” and click on the **Dependencies** tab.:

Ensure that the “**Allow DLL import**” checkbox is selected.

Note: When activating the Expert Advisor in MetaTrader 5 for the first time, Windows Firewall may display a security alert with the message:

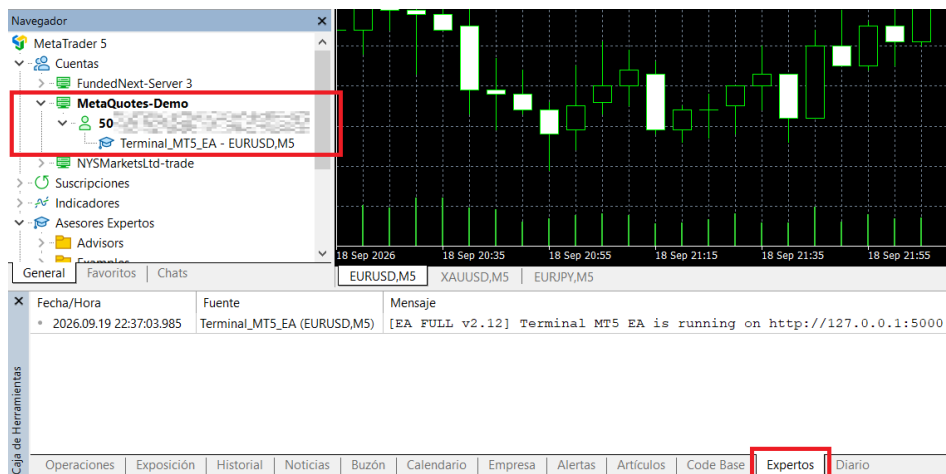

*This is completely **standard and safe behaviour**. It occurs because the EA needs to open a local communication port (WebSockets/HTTP) to send and receive orders from the Terminal MT5 extension in real time.*

Click the **Allow access** button.

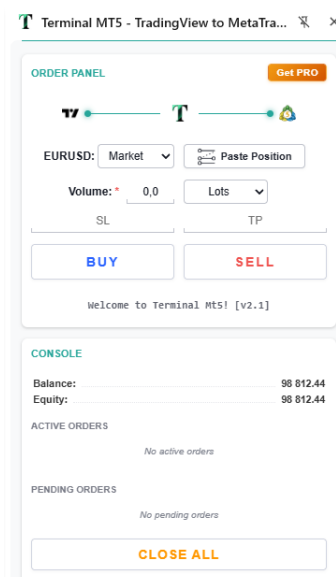

5. Click Accept and verify that the **blue** Expert Advisor symbol appears in the top-right corner:

6. Click on the "Experts" tab; it should display "Terminal MT5 EA is running on <http://127.0.0.1:5000>":

Congratulations! Open your MT5 Terminal extension; This should show the connection between the extension and MetaTrader 5 in green and be seen with your account data:

Frequently Asked Questions (FAQ)

1. *Terminal_MT5_EA appears in gray:*

This is because the **"Algorithmic Trading" option is disabled**; enable it by clicking on it.

2. *I get "EA Disconnected" after finishing the installation:*

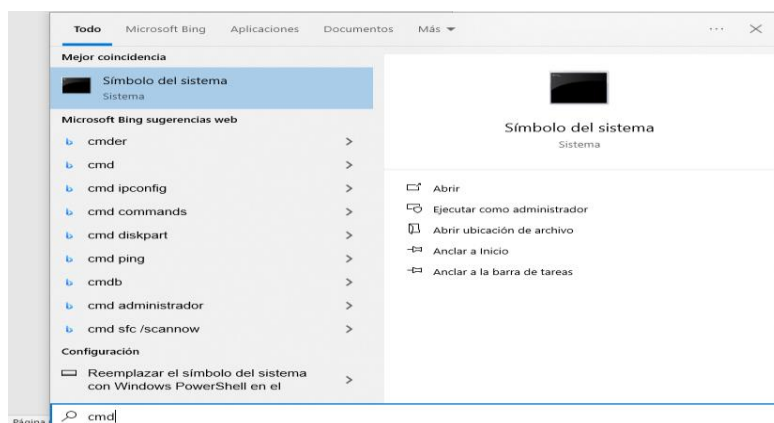

If this happens, check the [MetaTrader 5 Configuration](#) point again, it is very possible that some configuration is missing to be activated.

If the error persists, check the **"Experts" tab (at the bottom)**; any error related to the EA should appear there. If there are no errors, close and reopen MetaTrader 5 and [reinstall the EA](#).

3. *MetaTrader 5 freezes, "port already in use" error::*

It is possible—though unlikely—that MetaTrader 5 might hang when you try to run the EA because port 5000 on your PC is already in use, preventing the EA from installing when dragged onto the chart; do not worry, however, as you can resolve this by **closing MetaTrader 5** and opening a command prompt.

Press the Windows key and type cmd:

Once you have the console open, paste the following command and press Enter:

netstat -ano | findstr :5000

This will show you the process occupying port 5000, along with a number on the right; copy that number, enter the following line—replacing “**Numbercopied**” with the actual number—and press Enter:

taskkill /F /PID Numbercopied

With these steps, do the [EA installation](#) again since the port it needs will have been released and you will be able to install it without problems:

```
C:\Users\...\Desktop>netstat -ano|findstr 5000
TCP 127.0.0.1:2095 127.0.0.1:5000 SYN_SENT 19376
TCP 127.0.0.1:2096 127.0.0.1:5000 SYN_SENT 19376
UDP 0.0.0.0:500 *.* 3852
UDP 0.0.0.0:4500 *.* 3852
UDP [::]:500 *.* 3852
UDP [::]:4500 *.* 3852

C:\Users\...>taskkill /F /PID 19376
Correcto: se terminó el proceso con PID 19376.
```

4. The asset appears in red:

When the MT5 Terminal pair appears in red, it means you cannot trade that asset for one of the following reasons:

- The asset is not available for trading; it is disabled in your broker account.
- The EA is disconnected.
- The asset selected in TradingView is not among the tradable assets available for your account.
- You are not currently in TradingView, so the asset to be traded cannot be read, resulting in an "N/A" display.

To find out which of these cases applies, hover your mouse over the asset name, and an explanatory text will appear.

5. I switched accounts in MetaTrader 5 and the extension isn't working:

Check your [MetaTrader 5 Configurations](#); it is very likely that "Algorithmic trading" is disabled, because switching accounts reverts the EA to its default settings.

6. I want to reinstall or remove the EA:

To do this, right-click on the EA within your account in the **Navigador** window and select the option “**Remove from [AssetName]**”, then do the steps of [the installation of the EA](#):
